Extraterrestrial: Buildings Appear on the Moon

Can we build a wall on the moon? The moon appears to be no exception when it comes to extra-terrestrial activities, and it once again stirred curiosity amongst UFO fans.

Scott Waring, *UFO Sightings Daily's* website coordinator, reported on January 11, 2014 of tall building-like structures within the Paracelsus crater with an estimated measurements of .35-.45km across.

These structures were taken from photographs of the Apollo 15 missions.

The structures look like walls. Wilson, the anchor of an online video Whatsupinthesky.com described it to be of a similar structure on earth.

"Looks like a total wall configuration. I don't know what to call it...like the Great Wall of the moon here"

The most significant observation made by the online anchor is how straight the line of the wall is, suggesting that its absolute 'perfectness' could not have been made by human hands.

Alex Collier, a voluntary contactee of Ethical Extra-terrestrials, believes that the moon is a satellite designed and created to manipulate human sovereignty – made by manipulative aliens referred to by John Lash as the 'Archons'.

“Large mass structures, functioning as weights, have been designed into the structure of the moon to keep it from rotating on a normal basis, and they are located at both poles. These are magnetic in nature.”

Collier further alleges that when NSA astronauts went to the moon in 1958 they saw that there is indeed life outside planet earth.

"NSA astronauts, with their half human-half Grey guides, were taken to the underground facilities where the remains and skeletons of reptilian-like beings and human beings, as well as Orion technology, were located."

The problem I have with the 'Ancient Alien Theorists say....' clusterf--- is that they offhandedly denigrate humans as stupid and unable to innovate on their own so they need to be guided like sheep to some shiny future.
