---

Dear Mr. Ridge, I am Mickeen Hogan.

I am researching Aviation and Space History.

I read article that in Sept 1996 you spotted an unknown object circling the Moon aka U092196

A few years ago, a man named James Meador did a study that showed the Ascent Stage from Apollo 11's Lunar Module Eagle may still be orbiting the Moon. I attached the PDF of his study so you can review it.

<https://arxiv.org/pdf/2105.10088>

<https://thedebrief.org/whats-that-orbiting-the-moon-data-suggests-a-lost-spacecraft-could-be-lurking-in-lunar-orbit/>

This article I read said some have speculated that U092196 could be Eagle's Ascent Stage. Have you ever looked into this?

I know its been 29 years since you saw U092196 but imagine if it IS Eagle.

I had the honor of meeting Neil Armstrong and Buzz Aldrin at a dinner when I was 9, so I really do hope U092196 is Eagle

Mickeen
