LunaCognita Wrote: Here is a short but interesting clip of an unidentified object filmed using the DAC motion picture camera aboard the CSM during the Apollo 10 mission. This footage was taken when the spacecraft was around the far side of the Moon, near the crater "*Chaplygin*".

Personally, I think this UFO filmed with the DAC camera may also be the same object that was captured in Apollo 10 Hasselblad frame # AS10-28-3993.

On a possibly related note - there was also another UFO filmed during Apollo 10 with the DAC camera, and I actually showed that very similar looking clip in another compilation video that I made awhile ago. The clip is a short one, and starts right at the 2:10 mark of this video below.
